Summary

Design Engineer with 8+ years of experience building frontend platforms, design systems, and web infrastructure. Currently leading web engineering across Labelbox's marketing and product-facing web properties. Focused on scalable frontend architecture, design systems, CMS-driven workflows, and AI-assisted developer tooling to improve engineering velocity, consistency, and content operations.

Professional Experience

Labelbox

Senior Web Developer & Design Engineer

Nov 2021 – Present

Web Platform Ownership

- Own architecture and development for [labelbox.com](#), [alignerr.com](#), and [prism.labelbox.com](#).
- Partner with design, product, and marketing teams to deliver performant, SEO-optimized web experiences.
- Lead technical direction for marketing and product-facing web infrastructure.
- Maintain production systems with a focus on reliability, accessibility, and performance.

Design Systems & Frontend Architecture

- Built and scaled a Storybook-based design system used across multiple web properties and internal applications, adopted by engineering and design teams for building marketing and product UI.
- Standardized reusable React + TypeScript components, reducing duplicate implementation and improving UI consistency across production surfaces.
- Established a Figma → Storybook → implementation workflow that improved adoption of shared components and streamlined design-to-development delivery.

Internal Platforms & Developer Experience

- Built internal platforms supporting AI evaluation, authentication, security tooling, and engineering workflows.
- Designed reusable frontend foundations used across multiple internal applications.
- Owned architecture, implementation, deployment, and long-term maintenance.

AI Tooling & Engineering Productivity

- Created AI-powered development workflows using Claude, Cursor, and custom engineering skills.

- Automated documentation, implementation patterns, accessibility reviews, and design system adoption.
- Established repeatable workflows that improved consistency and reduced implementation effort.

CMS & Content Infrastructure

- Architected component-driven CMS workflows enabling non-technical teams to manage content independently.
- Built scalable content models and publishing systems while maintaining accessibility, SEO, and performance standards.

AI Evaluation & Data Visualization

- Built evaluation dashboards supporting rubric scoring, QA workflows, model comparison, experiment tracking, and cost analysis.
 - Developed reusable Plotly and Chart.js visualization systems used across internal tooling.
-

Triple Crown Products

Full Stack Developer

Jul 2017 – Oct 2021

Ecommerce Platform Modernization

- Led modernization of legacy ecommerce platforms through React adoption and component-based architecture.
- Improved maintainability while minimizing disruption to production systems.

Performance & SEO

- Increased website performance by approximately 40% through caching and frontend optimization.
- Delivered SEO improvements that increased organic traffic by approximately 60%.

CMS & Marketing Systems

- Built a custom CMS enabling marketing teams to schedule releases, manage content, and deploy campaigns independently.
 - Reduced engineering involvement in day-to-day content operations.
-

Core Expertise

Design Engineering: Next.js • React • TypeScript • Storybook • Tailwind CSS

Frontend Platform: Design Systems • Accessibility • Performance • SEO • CMS Architecture

AI & Developer Experience: Claude • Cursor • AI Workflows • Documentation Automation

Cloud & Backend: Node.js • Cloud Run • BigQuery • GCS • Authentication
