

Uday Vatti | Sr. Web Developer / Designer

San Francisco, CA | [Portfolio](#) | [LinkedIn](#) | 480-233-2224 | vuday23@gmail.com

Summary / Objective

Senior Web Engineer with over 8 years of experience building production platforms end-to-end — from authentication infrastructure and cloud data pipelines to internal tooling and public-facing web. At Labelbox I own and operate multiple full-stack systems across model evaluation, security, and data engineering, with hands-on responsibility for GCP infrastructure, Next.js application architecture, and platform design. Proven ability to take a product from zero to production and own it through scale.

Core Competencies

- **Platform Engineering:** Next.js, React, TypeScript, Node.js, REST & RPC APIs
 - **Cloud Infrastructure:** GCS, BigQuery, Cloud Run, Vercel, Supabase (Postgres + RLS)
 - **Auth & Security:** RBAC systems, JWT, OAuth, npm SDK authoring, audit logging, SCA tooling
 - **Data Engineering:** ETL pipelines, cron-based processors, JSON processing, BQ data modeling
 - **UI & Design Systems:** Tailwind CSS, Storybook, Figma-to-code, data visualization
 - **Tooling & Operations:** CI/CD, GitHub Actions, Headless CMS (Sanity, Contentful), Agile
-

Professional Experience

Sr. Web Developer & Designer | **Labelbox**, San Francisco, CA | *Nov 2021 – Present*

- **Platform Engineering:** Architected and launched multiple production platforms from scratch, spanning model evaluation, internal authentication, security tooling, and data management. Each platform is fully owned end-to-end — from database schema and API design to deployment and ongoing iteration.
- **Cloud Infrastructure & Data Pipelines:** Modernized core data infrastructure by migrating flat blob storage to a GCP-native stack using GCS, Cloud Run, and BigQuery.

Engineered a GCS auto-scan service for automated data discovery and registration, which established the standard production ingestion pattern for all teams.

- **Authentication & Security Systems:** Built a centralized authentication and authorization gateway published as a private npm SDK, eliminating redundant auth implementations across internal products. Developed a security issue tracker for the DevOps/SecOps team from scratch.
- **Data Visualization & Analytics:** Developed an evaluation dashboard for multiple project types, featuring rubric scoring, QA, and cost/model analysis with real-time pipelines and deep-link sharing. Created reusable Plotly and Chart.js components for internal product use.
- **Web & Content Engineering:** Own engineering for labelbox.com, alignerr.com. Led Storybook adoption for design system documentation and extended headless CMS schemas to support new content authoring workflows.

Full Stack Developer | **Triple Crown Products** | *July 2017 – Oct 2021*

- **E-commerce Transformation:** Led the modernization of e-commerce platforms, migrating legacy systems to React and SASS.
- **Performance Optimization:** Increased website performance by 40% through aggressive caching strategies and asset optimization.
- **Organic Growth:** Engineered SEO enhancements that drove a 60% increase in traffic.
- **CMS Innovation:** Built a custom CMS that empowered marketing teams with scheduled content releases and feature flag deployments.

Web Developer | **Center for Governmental Studies** | *June 2016 – May 2017*

- **Data Engineering:** Developed interactive visualization tools for researchers using D3.js and C#
- **Public Impact Tools:** Built responsive platforms to visualize complex educational metrics.

Selected Project

[Them Design Studios:](#)

- Built a modern web presence for a creative agency, delivering a responsive portfolio site that increased inquiries by 200%.
- Optimized performance, achieving 95+ Lighthouse scores.
- Technologies used: React, Firebase, Contentful, GSAP, Styled Components, Tailwindcss
